RECEIVING AERIAL

The doublet type of aerial is excellent for reception on short waves. The electrical interference and other noise picked up on the twin feeder is balanced out with a consequent reduction in background noise.

The two sections forming the aerial proper should be strung to any convenient supports, as high as possible and free of other objects. The flexible insulated twin feeder is taken to the receiver through a small hole or other opening, no additional insulation being necessary.

The aerial is supplied complete with end and centre insulators, and is ready for immediate erection. The length of feeder is 100 feet, to allow the aerial to be sited well in the clear.

EDDYSTONE

PLINTH LOUDSPEAKER

A dual purpose unit, which is intended for fitting underneath a communications receiver, the latter being thus tilted at an angle which allows better viewing of the scales, and leads to easier control of knobs and switches.

Fitted to the front panel is an elliptical speaker of 3 ohms impedance, which is suitable for direct connection to the speaker output terminals of Eddystone receivers and most other makes also. The width is 16", depth 10½", and height at front 3¼". Weight 2½ lbs. Finish—smooth grey.

Cat. No. 906

List Price £1 19 4

GENERAL PURPOSE LOUDSPEAKER

A useful general purpose cabinet loudspeaker, of compact dimensions, the measurements being width 8¼ inches; height 4½ inches; depth 2½ inches. The cabinet, of steel, is finished a pleasing grey and matches well with current Eddystone receivers, and other receivers also.

The speaker can be used free-standing and it lends itself to easy mounting on a wall or bulkhead. Impedance is 3 ohms and connecting lead is fitted.

HIGH QUALITY TELEPHONE HEADSET (Low Impedance)

These high quality telephones will be of particular appeal to those seeking something well above average. For the amateur or professional operator, the headset ensures really excellent speech quality. Because of the wide frequency range and low distortion at high sound levels, the telephones are recommended for listening to music at high fidelity, in cases where it is undesirable to use a loudspeaker.

The robust moving coil system is housed in light-weight, shock-proof moulded enclosures. The comfortable headband is adjustable to the individual user and hygienic noise-excluding pads are fitted.

Impedance is 400 ohms, making the headset suitable for use with practically all receivers. Weight is approximately 10 ozs, the finish being an attractive combination of cream and black.

Cat. No. LP2921

List Price £8 5 0

LIGHTWEIGHT TELEPHONE HEADSET

This telephone headset is of modern design and offers many advantages. Sensitivity is high and the quality of speech reproduction is good, whilst the telephones are equally suitable for reception of CW signals. It may be noted that telephones of this type are favoured by the majority of professional operators.

The material is mainly reinforced Nylon, which is strong, durable and very light in weight. The headset is adjustable to fit the individual head and is most comfortable to use.

The impedance is 600 ohms, a value which makes the telephones suitable for use with most receivers. A standard two-contact type of telephone plug is attached to the flexible cord. Weight is 6 ozs. and the colour black.
