INDEX TO EDDYSTONE MODELS

Viewers should note that this index is not necessarily 100% complete or accurate. Any omissions or corrections should be e-mailed for updating to Anthony Richards, GW4RYK, at forwyn@aol.com

Some of the earlier radios, such as the Atlantic Three, are not factory built sets but use Eddystone circuitry and 'Eddystone Specified' components and were featured in the 'Eddystone Short Wave Manuals'; thus they are included here for the sake of completeness.

Marconi & MIMCO radios are cross-referenced and can be found collectively under 'M'.

When looking at faults and problems, viewers are reminded that many radios shared common circuitry and components, for example the EB35, EB36, EB37 & EC10 range, and the 840 range. Whilst faults etc. with individual models are listed as they arise in the newsletters, much can be gleaned from looking at references to similar sets.
